Follow-up from "regional driver awareness" (Mr Roy Butler)

To support all sectors of society, from emergency responders to automotive dealerships and servicing facilities, EV FireSafe is offering the much needed correct and up to date training from subject matter experts - information can be found here www.evfiresafe.training

Additionally, we are excited to announce that we will be running **the first Electric Vehicle Responder live training session in the world that includes:**

- Emergency response considerations for both Electric Vehicles & Charging Equipment
- Techniques, tactics, tools & training
- Cutting edge latest case studies of actual incidents and global learnings
- Information and static displays across
 - Personal Mobility Devices
 - Road registered cars
 - Converted electric vehicles*
 - Electric truck*
 - Electric bus*
- Display of correct emergency response procedures, including live demonstration of vehicle extrication with multiple electric vehicles being cut up for road rescue considerations and tactics to ensure the safety of responders & those involved in the incident, striving for safer road users while negating a need for a "Tactical Disengagement" by responders.

EV FireSafe would welcome the opportunity to develop and deliver a "what to do" style awareness package for all road users, as one part of the training we are delivering and increasing the scope of context and would welcome working with Mr Roy Butler, the StaySafe committee, and wider NSW Parliament to collaborate to achieve the best possible safety outcomes and value for the people of New South Wales.
