

Attached is more information on the sort of returns that can occur. Some information from Canada at the attached link...

<https://www.canada.ca/en/departement-finance/news/2024/02/canada-carbon-rebate-amounts-for-2024-25.html>

Such as “In provinces where the federal fuel charge applies, a family of four will receive up to \$1,800 under the base Canada Carbon Rebate in 2024-25. In April 2024, residents of these provinces will receive their first of four quarterly Canada Carbon Rebate payments, with additional payments in July 2024, October 2024, and January 2025.”

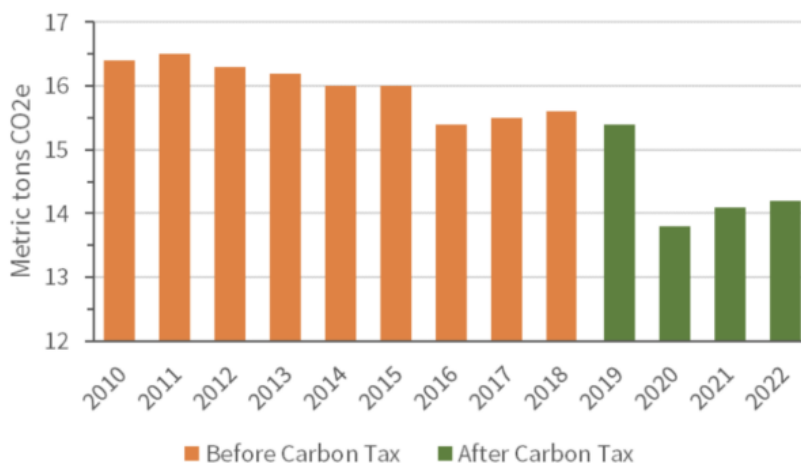

The page also includes two Tables of data on the amounts that Canadians will receive.

In addition, Dennys has sent me the following:

<https://citizensclimatelobby.org/blog/policy/perception-gap-plagues-canadas-carbon-price/>

### The emissions

Here is a chart of Canada’s greenhouse gas emissions per person from 2010 to 2022. The orange bars are prior to the enactment of the carbon tax, and the green bars are with the tax in effect.

Canadian Greenhouse Gas Emissions per Capita (Chart by CCL, adapted from [Our World in Data](#))

I have read my parts of the transcript and they appear to be accurate. Thanks for the opportunity to review them.

Regards,

*Richard*
