Reintroduce the Insulation scheme and LED lighting scheme and ensure it's endorsed to use last trades. People don't create the flyby night Tom Dick and Harry scenario that happened when Peter Garrett did it to the board or hide a truck filled with insulation and jumped into roof void creating more damage than Good.

You've had 80s and 90s three unit blocks throughout Sydney with no Insulation and lucky to have sucking under Tiles creating a loss of heat and cool And winter and summer respectively increasing these top four occupants Energy built by 30 to 40%. I putting in LED lighting on these top floors especially reduces the risk of fire in these roof voids And working in Strata and Fire approval should be shared amongst the entire block as the asset for all owners includes the roof void even if they're on lower floors.

This should've already happened before all the implementation of alternative Energy as we've been doing too little for far too long. 75% of humans on this planet won Council and Govt to shift away from hideous fossil fuel stop backing the big conglomerates start taxing them and create funds to reinstate species loss and reduce the warming affect. The hideous elite seem to think their money can fix?

Your file attachment needs to be able to take underscore get IT people to fix this otherwise all attachments will be lost

Similarly in Strata environments agents should be endorsing IC to All switchboards. This shouldn't be an option who knows how to change enamel Fuse these days and with sub boards locked in Stair switch rooms this type of standard and impossibility to maintain a blown fuse and as any electrician will tell you increases risk greatly.

Lastly upgrading fibre to the building for all stage one rollout is a must. This arc copper cannot handle high-speed data and telecommunication on ombudsmen should be insuring costs differ where Telco are charging the same for both. It's a far inferior service compared to the stage two and three rollout of fibre to the building
