**INQUIRY INTO IMPACT OF RENEWABLE ENERGY
ZONES (REZ) ON RURAL AND REGIONAL
COMMUNITIES AND INDUSTRIES IN NEW SOUTH
WALES**

Name: Name suppressed

Date Received: 18 January 2025

Partially
Confidential

1. Insurance.

My primary production business would not be able to afford the Insurance.

2. Fire.

What departments would be in place?

Deputy captain of Leadville brigade and we are the largest brigade in the area and we would not have the capacity for such events. There would be no aerial support if such a fire would break out due to restrictions around the turbine projects. These turbine projects are set in bushland that are beyond the mobile resources

3. Community fall out.

The community would/is already in despair. Families will leave and neighbours will argue over these projects. Who's got paid subsidies and who missed out for being neighbours and neighbours neighbour to all these projects.

4. The scenery.

The Leadville, Coolah, Dunedoo Areas hold beautiful rolling hills and land for productive farming.

5. Wildlife

Many native animals and plants are distinctively found in this area and would be at gear risk.

6. Pollution from wind turbine/solar projects

The whole renewable zone would be Polluted from the turbine fibres as they start to breakdown, to the solar pens causing erosion for land

7. Light shadowing from turbines

Our family home in the morning could be subjected to the shadowing effect of one or more of the Valley of the winds project turbines

8. Noise from turbines.

The noticeable humming coming from the turbine blades when wind conditions are favourable. This would be majority of the time.

9. Saleability and value of properties.

Financially this would make our property value fall and become unsaleable - this a major concern to us personally.
