**INQUIRY INTO MANAGEMENT OF CAT POPULATIONS
IN NEW SOUTH WALES**

Name: Name suppressed
Date Received: 21 November 2024

Partially
Confidential

We support humane, science-based solutions for cat welfare and wildlife protection in NSW!

Killing cats to protect wildlife hasn't worked before and it won't work now, it's cruel and doesn't solve the problem.

Community cat programs that focus on rehoming, targeted desexing, TNR and community education would be more effective at reducing stray cat populations.

Also most cat owners already keep their cats confined, but some face barriers like housing restrictions, high costs to modify properties, or lack of information. Mandatory 24-hour cat curfews, however, often target semi-owned or stray cats, which have no owners to enforce confinement. These curfews can backfire, with some people abandoning cats to avoid fines, adding to the stray population. Demonising cats can also encourage harmful actions, with mandatory curfews sometimes leading to unchecked cruelty, as there's often little oversight on trapping practices or what happens to the cats afterward.

Furthermore, It's easy to blame cats for the problems we face with wildlife, but the truth is, human actions have a much bigger role in creating these issues. Things like deforestation, clearing land for farming and urban sprawl are wiping out habitats for native wildlife, while making it easier for introduced species like cats to thrive. Unlike native animals, cats don't rely on specific ecosystems to survive, which means they can adapt and thrive in these altered environments. Instead of just pointing fingers at cats, we need to focus on fixing the root causes, like projects to restore habitats and bring back biodiversity!
